**NOTES:**

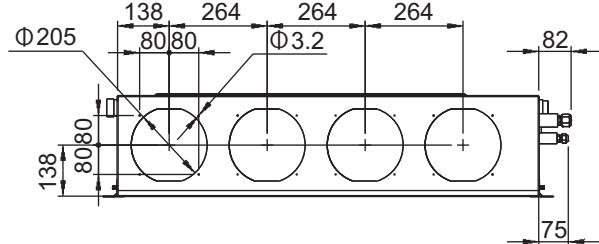

- Specifications are based on the following conditions:
  - Cooling: Indoor temperature of 27 °CDB/19 °CWB, and outdoor temperature of 35 °CDB/24 °CWB.
  - Heating: Indoor temperature of 20 °CDB/15 °CWB, and outdoor temperature of 7 °CDB/6 °CWB.
  - Standard static pressure: 24 type: 35 Pa, 30 and 36 types: 47 Pa, 45 type: 60 Pa
  - Pipe length: 5 m, Height difference: 0 m. (Between outdoor unit and indoor unit.)
  - Protective function might work when using it outside the operation range.
  - \*1: Maximum operating current is the total current of the indoor unit and the outdoor unit.
  - \*2: Sound pressure level:
    - Measured values in manufacturer's anechoic chamber.
    - Because of the surrounding sound environment, the sound levels measured in actual installation conditions might be higher than the specified values here.
  - \*3: Available on Google Play™ store or on App Store®. Optional WLAN adapter is also required. For details, refer to the setting manual.

- A twisted pair cable (22AWG) should be used. Maximum length of cable is 150 m.
- The wire connection should be separate from the power cable line.

Indoor unit functions such as Operation/Stop can be done by using indoor unit terminals.

\*1: The switch can be used on the following condition: DC 12 V to 24 V, 1 mA to 15 mA.

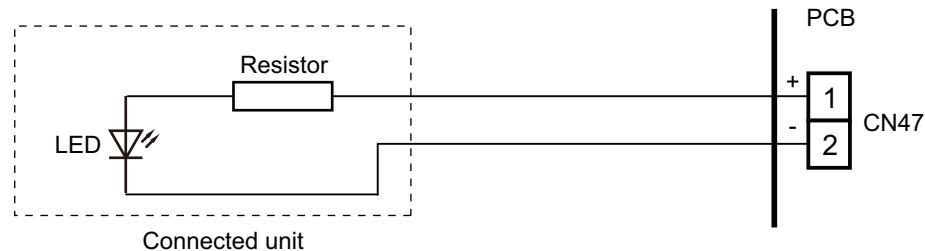

## 8-2. External output

Use an external output cable with appropriate external dimension, depending on the number of cables to be installed.

- A twisted pair cable (22AWG) should be used. Maximum length of cable is 25 m.
- Output voltage: High DC 12 V ± 2 V, Low 0 V.
- Permissible current: 50 mA
- For details, refer to "[Combination of external input and output](#)" on page 52.

**NOTE:** When "Operation/Stop" mode 2 function is used with forming a remote controller group, connect the same equipment to each indoor unit within the group.

## ■ Control output function

Function setting	External output	Output signal	Command
60—00	CN47	Low → High	Operation
		High → Low	Stop

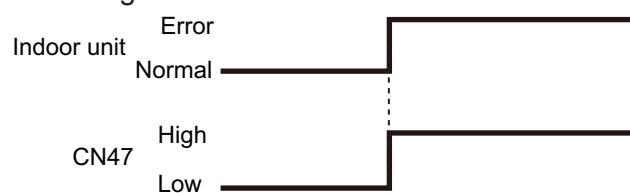

The output is low when the unit is stopped.

## ■ Error status

Function setting	External output	Output signal	Command
60—09	CN47	Low → High	Error
		High → Low	Normal

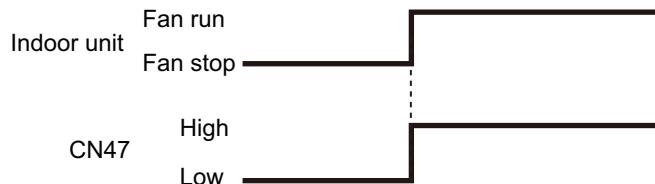

The output is ON when an error is generated for the indoor unit.

## ■ Indoor unit fan operation status

Function setting	External output	Output signal	Command
60—10	CN47	Low → High	Fan run
		High → Low	Fan stop

Output signal	Condition
On	The indoor unit fan is operating.
Low → High	
Off	The fan is stopped or during cold air prevention.
High → Low	During thermostat off when in dry mode operation.

## ■ External heater output

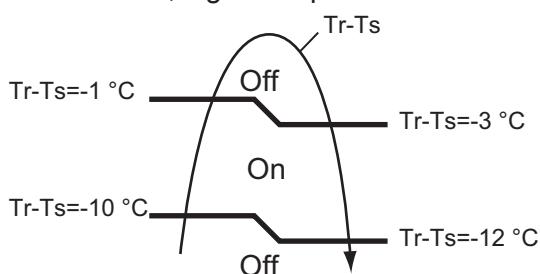

Function setting	External output	Output signal	Command
60—11	CN47	Low → High	Heater on
		High → Low	Heater off

Output signal	Condition
Low → High	Heater turns on as shown in diagram of heating temperature
Off → On	
High → Low	Heater turns off as shown in diagram of heating temperature <ul style="list-style-type: none"> <li>• Other than Heating mode</li> <li>• Error occurred</li> <li>• Forced thermo off</li> <li>• Fan stop protection</li> </ul>
On → Off	

Specifications of the signal output performance are as shown as follows:

**Example** When set temperature (Ts) is set at 22 °C;

- And room temperature (Tr) increase above 12 °C, signal output is on.
- And Tr increase above 21 °C, signal output is off.
- And Tr decrease below 19 °C, signal output is on.
- And Tr decrease below 10 °C, signal output is off.

The output also turns off in defrost operation.

### 3. Installation space

#### 3-1. Model: AOHG24KBTB

##### ■ Space requirement

Provide sufficient installation space for product safety.

###### **⚠ CAUTION**

Keep the space shown in the installation examples.

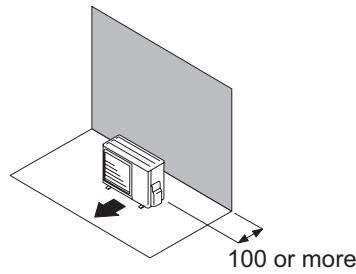

If the installation is not performed accordingly, it could cause a short circuit and result in a lack of operating performance.

##### ● Single outdoor unit installation

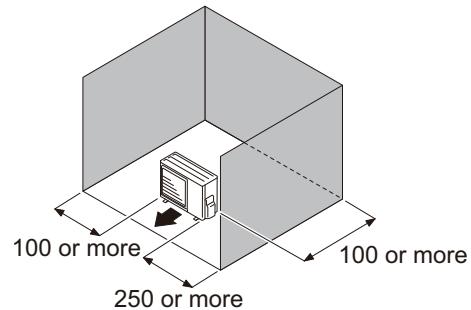

- When the upper space is open:

## ● Multiple outdoor unit installation

- Provide at least 250 mm of space between the outdoor units if multiple units are installed.
  - When routing the piping from the side of an outdoor unit, provide space for piping.
  - No more than 3 units must be installed side by side.
- When 3 units or more are arranged in a line, provide the space as shown in the following example **"When an obstruction in the upper space:"**.

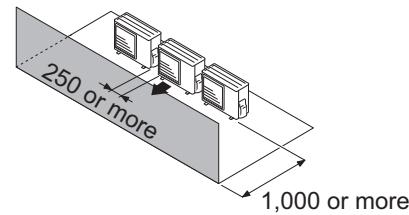

- When the upper space is open:**

**NOTES:**

- If the space is larger than stated above, the condition will be the same as when there is no obstacle.
- When installing the outdoor unit, be sure to open the front and left side to obtain better operation efficiency.

**△ CAUTION**

- Do not install the outdoor unit in two-stage where the drain water could freeze. Otherwise the drainage from the upper unit may form ice and cause a malfunction of the lower unit.
- When the outdoor temperature is 0 °C or less, do not use the accessory drain pipe and drain cap. If the drain pipe and drain cap are used, the drain water in the pipe may freeze in extremely cold climate. (For reverse cycle model only.)
- In area with heavy snowfall, if the inlet and outlet of the outdoor unit is blocked with snow, it might become difficult to get warm, and it is likely to cause product malfunction. Construct a canopy and a pedestal, or place the unit on a high stand that is locally installed.

## 12. External input and output (30-45 models)

With using external input and output functions, this product can be operated inter-connectedly with an external device.

Connector	Input	Output	Remarks
P580	Low noise mode	—	See external input/output settings for details.
PA580	Peak cut mode	—	
P590	—	Error status	
PA590	—	Compressor status	

### 12-1. External input

With using external input function, on/off status of “Low noise mode” and “Peak cut mode” can be specified by the external signal.

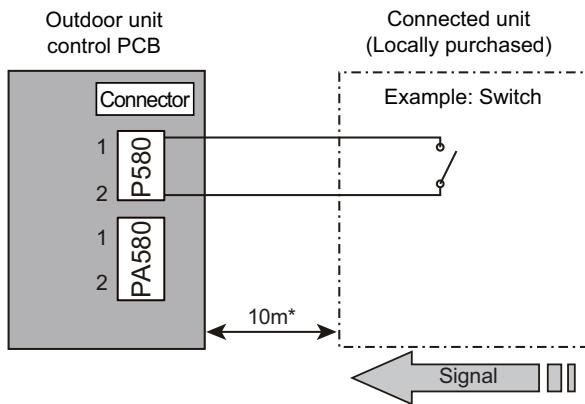

#### ■ Low noise mode

In following condition, the operating noise of the outdoor unit reduces comparing from the one in normal operating condition:

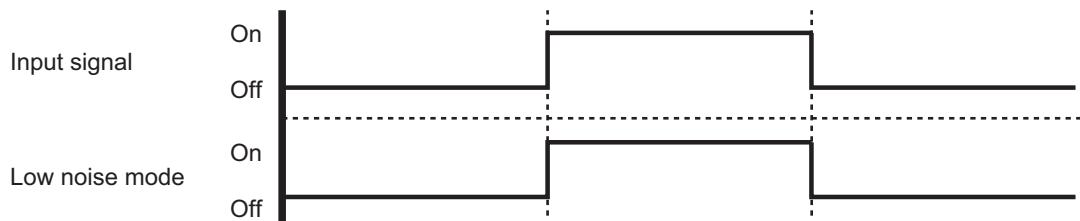

The air conditioner is set to the “Low noise mode” when closing the contact input of a commercial timer or on/off switch to a connector on the control PCB of the outdoor unit.

**NOTE:** Product performance may drop depending on some conditions such as the outdoor temperature.

- **Circuit diagram example**

- Contact capacity: DC 24 V or more, 10 mA or more.
- \*: Make the distance from the PCB to the connected unit within 10 m.
- Construct a circuit as shown in this figure with using optional parts mentioned below.
- Input signal: On in “Low noise mode”
- Input signal: Off in normal operation
- To set the level of “Low noise mode”, refer to “[Low noise mode](#)” on page 103.

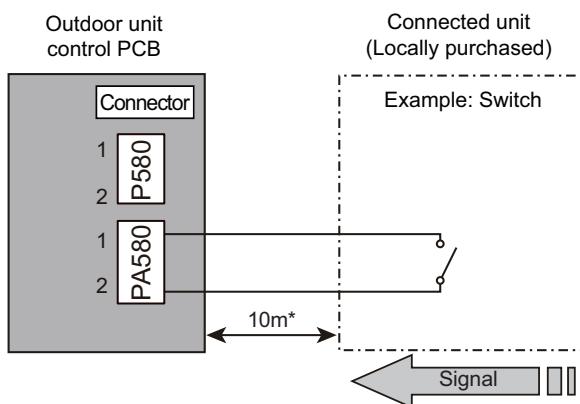

- **Optional part**

Part name	Model name	Exterior
External connect kit	UTY-XWZXZ3	External input wire 

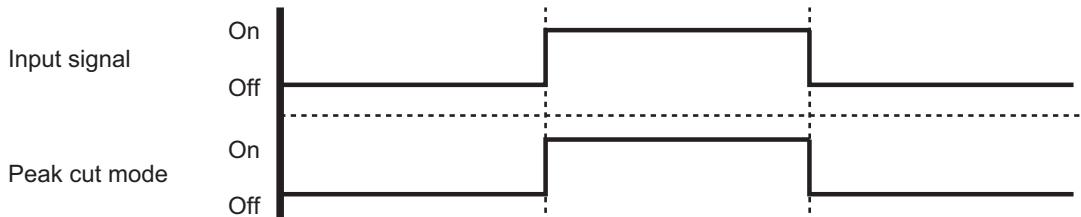

## ■ Peak cut mode

By performing following on-site work, operation that suppresses the current value can be enabled:  
The air conditioner is set to the “Peak cut mode” when closing the contact input of a commercial timer or on/off switch to a connector on the control PCB of the outdoor unit.

- **Circuit diagram example**

- Contact capacity: DC 24 V or more, 10 mA or more.
- \*: Make the distance from the PCB to the connected unit within 10 m.
- Construct a circuit as shown in this figure with using optional parts mentioned below.
- Input signal: On in “Peak cut mode”
- Input signal: Off in normal operation
- To set the level of “Peak cut mode”, refer to “[Peak cut mode](#)” on page 104.

- **Optional part**

Part name	Model name	Exterior
External connect kit	UTY-XWZXZ3	External input wire 

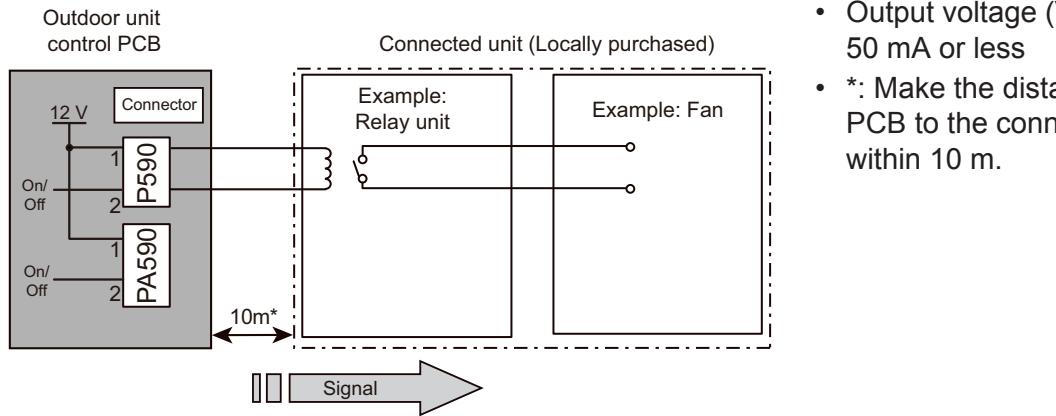

## 12-2. External output

With using external output function, some status signals are transmitted to the control PCB, and the related LED lamp indicates the status of this product.

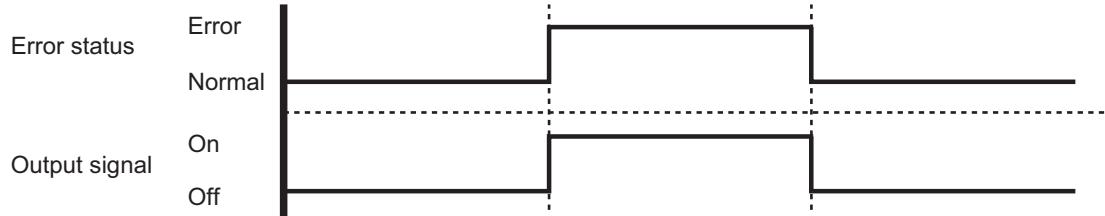

### ■ Error status output

Signal on air conditioner error status is generated when a malfunction occurs.

- **Circuit diagram example**

- Output voltage (Vcc): DC 12 V  
50 mA or less
- \*: Make the distance from the PCB to the connected unit within 10 m.

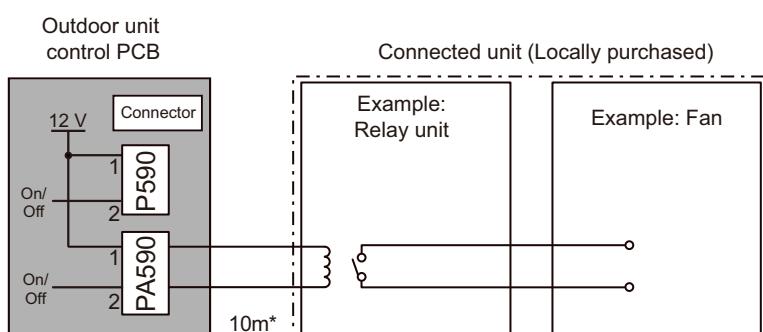

- **Optional part**

Part name	Model name	Exterior
External connect kit	UTY-XWZXZ3	External output wire 

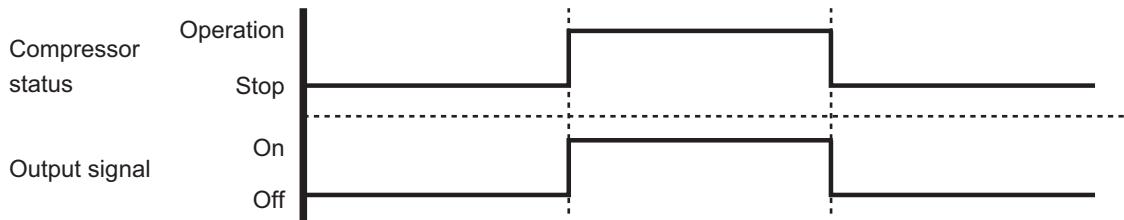

## ■ Compressor status output

Signal on compressor operation status is generated when the compressor is running.

- **Circuit diagram example**

- Output voltage (Vcc): DC 12 V  
50 mA or less
- \*: Make the distance from the PCB to the connected unit within 10 m.

- **Optional part**

Part name	Model name	Exterior
External connect kit	UTY-XWZXZ3	External output wire 

## 13. Function settings (30-45 models)

Perform appropriate function setting locally according to the installation environment.

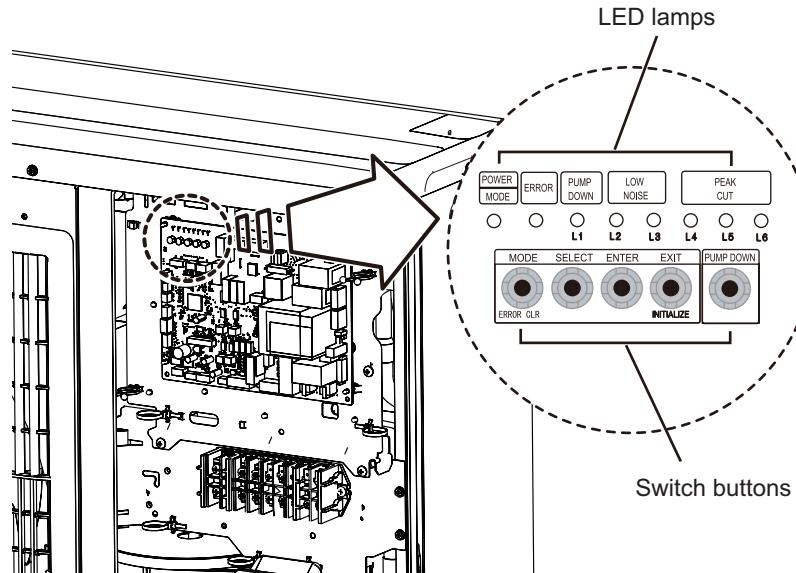

**NOTE:** Incorrect settings can cause a product malfunction.

### ⚠ CAUTION
